

WAY WIPERS

FOUR TYPES AVAILABLE FROM STOCK AT HIGGINSON

Way wipers save costly maintenance repairs, reduce downtime, and prolong the service life of machine tool ways.

- ⇒ The wipers are molded of abrasion and oil-resistant Buna-N elastomer.
- ⇒ All four types employ the same style wiping member and are available in standard 22" lengths, which can be easily cut to required lengths.
- ⇒ Oversized holes may be drilled in the wiper and screws may be used to attach the wiper to sliding member.
- ⇒ Use of oversized holes makes it easy to adjust the wiper closer to the way for extended service life.

TYPE A

220001

Metal enclosed molded wiper with a finger spring to act as a chip guard.

TYPE B

220002

Molded wiper with metal strip bonded to one side.

TYPE C

220003

Molded wiper only. Recommended use of metal mounting plate.

TYPE D

220004

Molded wiper with light metal strip which acts as finger spring and chip guard.
